TRAVEL AWARENESS, MADE CLEARER

TraceRisk

The travel field guide for India.

Know what could affect your trip—before you go.

AZINHACK 2026 / PROJECT PRESENTATION

Too many tabs. Too little context.

Before you travel, what has changed?

Useful information exists.
Connecting it takes time.

01 **Local reports**

Does this story apply to my destination?

02 **Transport updates**

Could my route or journey be affected?

03 **Weather & notices**

Does the information cover my dates?

The need: one useful briefing for a specific trip.

One trip. One clear briefing.

A simple flow from travel plans to useful context.

01

Plan your trip

Choose a destination and travel dates.

02

Confirm the place

Select the right city, district and state.

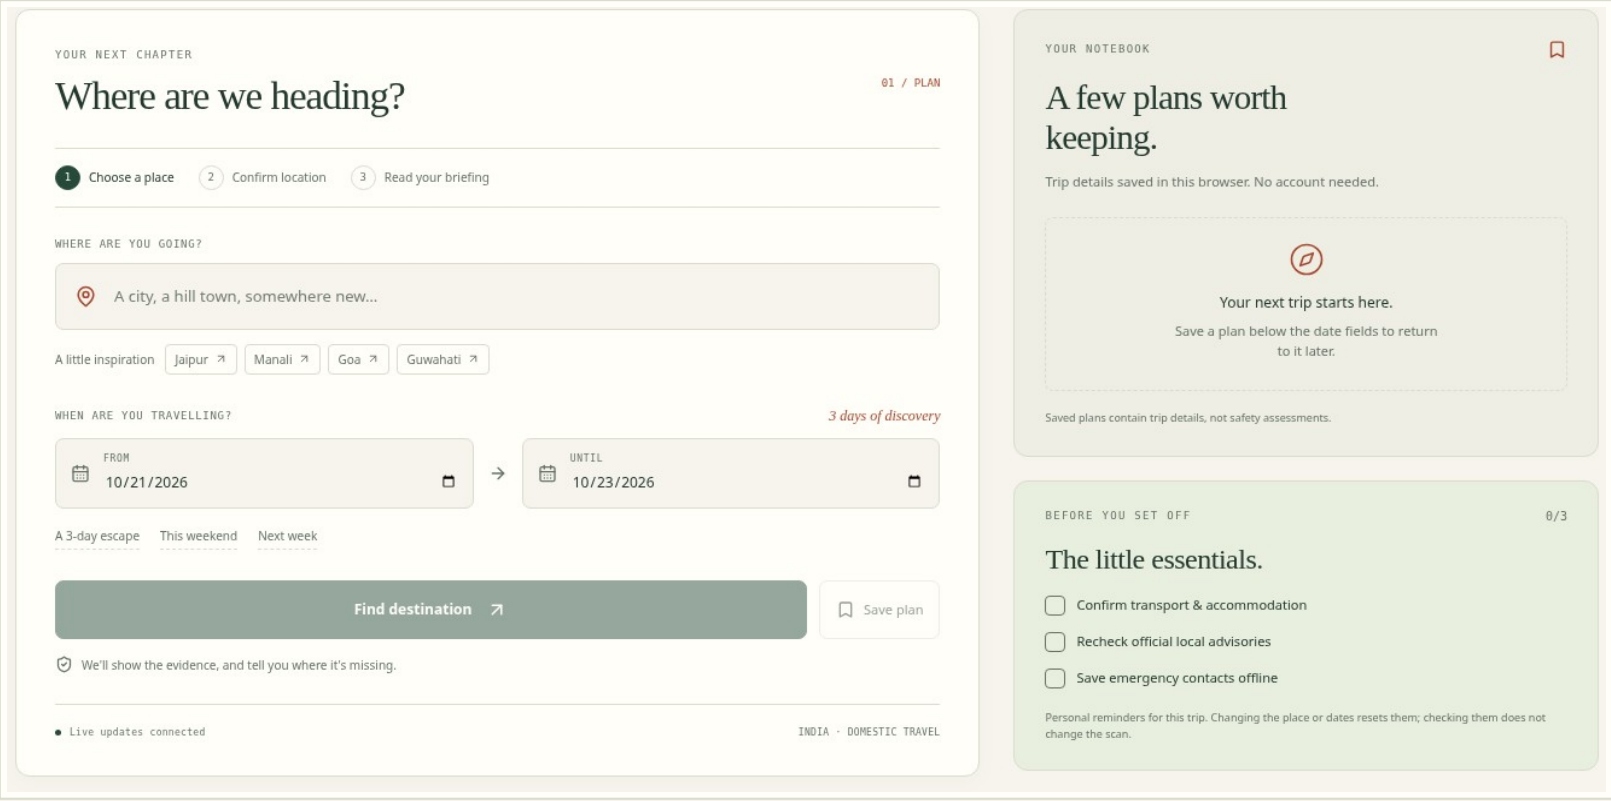

03

Read your briefing

Review findings, sources and information gaps.

Save a plan. Check the evidence. Keep the briefing.

A travel notebook you can actually use.

01

Plan in seconds

Date shortcuts and place confirmation.

02

Stay organised

Saved plans and a trip checklist.

03

Make it yours

Light / dark themes. Download your briefing.

ACTUAL INTERFACE / PLANNING SCREEN / NO LIVE SCAN SHOWN

The local picture, from four angles.

Eight search lanes, plus weather and river-model context.

01 / GETTING THERE

Roads & traffic
Public transport
Infrastructure

02 / LOCAL CONDITIONS

Civil unrest
Official advisories
Regional news

03 / PERSONAL AWARENESS

Health reports
Crime reports

04 / NATURAL CONDITIONS

Weather forecasts
River-flow outlooks

MODELS PROVIDE PLANNING CONTEXT; OFFICIAL WARNINGS STILL NEED CHECKING.

Collect. Review. Explain.

A small pipeline turns scattered inputs into a readable briefing.

01

Collect

TinyFish: local reports.
Open-Meteo: places and forecasts.

→

02

Review

Gemini reviews reports.
Groq or labelled rules provide a fallback.

→

03

Explain

Cited findings.
Collection coverage.
Missing forecast dates.

Interface: React + Vite | Server: Node.js + Express

Confidence starts with honesty.

01	Show the evidence	Citations, dates and source-quality labels.
02	Show what is missing	Collection gaps and uncovered forecast dates.
03	Keep the score in context	A planning signal, not a probability of harm.

No findings does not mean no risk.

A working prototype, with a clear next step.

BUILT TODAY

- Trip planning, saved plans & themes
- Source-linked findings & coverage gaps
- Filters, briefing download & print
- Cancellation, fallbacks & request limits

LOCAL VERIFICATION

33 + 12

Node tests + browser tests

Production build passed.

Fixture-based checks; not a live-provider certification.

Next: traveller feedback and a small, clearly labelled hotel-ad pilot.

Evidence first. Sponsored stays second.

Earn from hotel visibility while keeping the travel briefing independent.

1. Check the destination

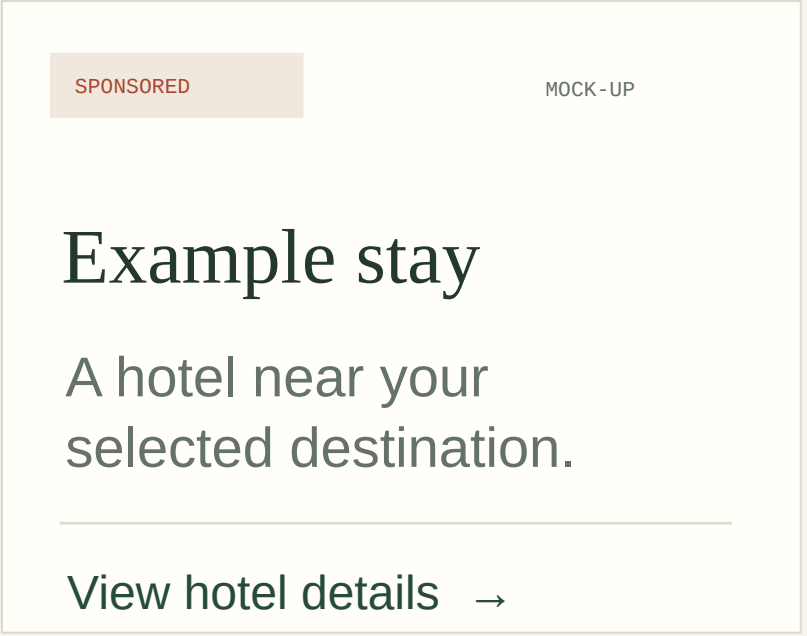

Use fresh, adequate evidence and review warnings.

2. Show relevant hotel ads

Hide ads if evidence is weak or warnings appear.

3. Keep a clear boundary

Label ads. Payment never changes the assessment.

Lower concern is not a safety guarantee. Hotel quality needs separate checks.

Start with a simple hotel subscription.

ILLUSTRATIVE PILOT PRICING / NO CURRENT REVENUE

10 hotels × ₹1,000 / month

₹10,000

gross revenue / month

FIRST

Monthly sponsored placement

LATER / OPTIONAL

Booking-referral fees, if partners agree

Pilot questions: will hotels pay, will travellers click, and what does each scan cost?

Hypothetical math. API, hosting, marketing, fees and taxes reduce net income.

A focused path from prototype to pilot.

01 / LEARN

Test with travellers

Test with travellers.
Improve clarity.
Measure usefulness.

02 / PILOT

Pilot hotel ads

Verify hotel details.
Label every promotion.
Test willingness to pay.

03 / IMPROVE

Improve coverage

Evaluate source freshness.
Add local-language reporting.
Prepare to scale.

Pilot targets and future work—not existing users, partners or revenue.

EXPLORE WITH CURIOSITY. TRAVEL WITH CONTEXT.

Good journeys start with better context.
